Imagine you wake up on a normal day and drive to work. It turns out, today your car's plate number violated the number coding rule. You get pulled over, and issued a ticket. This slows you down. You arrive 20 minutes late for work. Your boss reprimands you. Then after working 8 hours, you decide to pass by the convenience mart. As you exit the store, the crinkle of the plastic bags turns into a snap! Everything falls out onto the floor. As you bend over to pick them…

If you travel few centuries back in time and try to explain to the people of Roman empire non tangible concepts about software,artificial intelligence,quantum computing, what would their reaction be? They probably won't understand horseshit because these concepts are beyond their realm of understanding and intelligence. We have come to quantum computing step by step and not with a giant leap. So how can you expect to comprehend the technology and the biological form of some alien being ...

If you travel few centuries back in time and try to explain to the people of Roman empire non tangible concepts about software,artificial intelligence,quantum computing, what would their reaction be? They probably won't understand horseshit because these concepts are beyond their realm of understanding and intelligence. We have come to quantum computing step by step and not with a giant leap. So how can you expect to comprehend the technology and the biological form of some alien being who are maybe 1 million years or 1 billion years older than us when we can't explain our technology to ourselves few hundred years back. They will be so advanced that we won't be able to recognise them if they stood near us. According to cosmologist Paul Davies, Yup that's him. He believes that we'd be lucky to recognise a billion year advanced beings. They may not be made of matter at all. They may not have any physical form, not constrained by space and time, they won't act or think like we do. We might not be alone. Even at this moment we might be surrounded by these advanced beings and not comprehend them at all. They might be watching you behind your back as you upvote this.
